Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-8, the prior art fails to teach or suggest a method for identifying computer network protocols used to encapsulate data in a protocol data unit, which comprises the steps of while there remains at least one stage for which protocol data unit is to be searched, iteratively performing "while there remains at least one search pattern of the selected stage for which the protocol data unit is to be searched, iteratively performing: selecting one of the remaining search patterns, and searching the protocol data unit for the selected search pattern," in combination with other limitations, as specified in the independent claim 1.

Regarding claims 9-16, the prior art fails to teach or suggest a storage medium readable by a protocol identification apparatus, tangibly embodying a computer program of instructions executable by the protocol identification apparatus to perform method steps for identifying computer network protocols used to encapsulate data in a protocol data unit, the steps comprising "while there remains at least one search pattern of the selected stage for which the protocol data unit is to be searched, iteratively performing: selecting one of the remaining search patterns, and searching the protocol data unit for the selected search pattern," in combination with other limitations, as specified in independent claim 9.

Regarding claims 17-22, the prior art fails to teach or suggest an apparatus for identifying those computer network protocols used to encapsulate data in a protocol data unit, comprising "a pattern comparator, wherein the pattern comparator is
